Apply filters to SQL queries

Project description

In this projects we will use SQL queries to assist us in completed every day tasks as a Secutity Analyst.

Retrieve after hours failed login attempts

I need to identify all failed after hours login attempts. This can be done be following a simple common sequence. First we will select ALL the data in the table with the SELECT * statement. Then we will reference the table to select "from" with 'FROM log_in_attempts'

Next we will specify the parameters for out search, which is failed login attempts after 18:00.

We can accomplish this with WHERE login_time > '18:00' AND success = '0'. And end the query with ";". These commands will produce the following result.

			9.00			
event_id	username	login_date	login_time	country	ip_address

Retrieve login attempts on specific dates

A suspicious event occurred on 2022-05-09. To investigate this event, you want to review all login attempts which occurred on this day and the day before. Use filters in SQL to create a query that identifies all login attempts that occurred on 2022-05-09 or 2022-05-08. To investigate this I will use the following commands.

SELECT *

FROM log in attempts

WHERE login date = '2022-05-09' OR login_date = '2022-05-08';

VIII. 10911 _ date						
MariaDB [organization]> SELECT * -> FROM log_in_attempts -> WHERE login_date = '2022-05-09' OR login_date = '2022-05-08'; +

Retrieve login attempts outside of Mexico

There's been suspicious activity with login attempts, but the team has determined that this activity didn't originate in Mexico. I wil investigate this using the following commands.

SELECT *

FROM log_in_attempts

WHERE NOT country LIKE 'MEX%';

<pre>MariaDB [organization]> SELECT * -> FROM log_in_attempts -> WHERE NOT country LIKE 'MEX%';</pre>

Retrieve all employees not in IT

My team needs to make one more update to employee machines. The employees who are in the Information Technology department already had this update, but employees in all other departments need it. We will locate these employees with the following commands.

MariaDB [organization]> SELECT * -> FROM employees -> WHERE NOT department = 'Information Technology';						
employee_id	device_id	username	department	office		
1000	a320b137c219	elarson	Marketing	East-170		
1001	b239c825d303	bmoreno	Marketing	Central-276		
1002	c116d593e558	tshah	Human Resources	North-434		
1003	d394e816f943	sgilmore	Finance	South-153		
1004	e218f877g788	eraab	Human Resources	South-127		
1005	f551g340h864	gesparza	Human Resources	South-366		
1007	h174i497j413	wjaffrey	Finance	North-406		
1008	i858j583k571	abernard	Finance	South-170		
1009	NULL	lrodriqu	Sales	South-134		
1010	k2421212m542	jlansky	Finance	South-109		
1011	1748m120n401	drosas	Sales	South-292		
1015	p611q262r945	jsoto	Finance	North-271		
1016	q793r736s288	sbaelish	Human Resources	North-229		
1017	r550s824t230	jclark	Finance	North-188		
1018	s310t540u653	abellmas	Finance	North-403		
1020	u899v381w363	arutlev	Marketing	South-351		

As you can see, the table now reflects all the employees that are NOT in the IT department.

Summary

In summary, we can use a myriad of filters in SQL to resarch the database. These are just a few of the ways we accomplish these tasks.
